## THE DIRECTOR OF CENTRAL INTELLIGENCE

WASHINGTON, D.C. 20505

Deputy Director for National Foreign Assessment

NFAC 6492-81  
13 October 1981

MEMORANDUM FOR: Chairman, Joint Atomic Energy Intelligence Committee

FROM: [REDACTED]

25X1

Special Assistant for Nuclear Proliferation  
IntelligenceSUBJECT: JAEIC Paper on Safeguards at [REDACTED] Reactor  
(dated 28 August 1981)

25X1

1. It is my understanding that the Department of State does not concur in the subject paper as it now stands. Their non-concurrence is based on the degree of certainty that is expressed in the paper on the fuel diversion question and not on the technical calculations of the various diversion possibilities. Additionally, recent reporting has shown that we have anomalies on top of anomalies. For example, why should any dosimeter have a high reading if, indeed, they are so easy to remove and replace.

2. In light of the above, I am requesting the JAEIC to update the subject paper and, in particular, its judgment on the likelihood of diversion. If concurrence on this issue is not possible, I would rather see agency positions than generalized language that obscures substantive differences of opinion.

3. To be most useful the paper should be to me by COB October 20. Initial distribution should be to the undersigned and those members who have received the raw reports.
